

Examination the role of technical information in the development of nursing education for the Faculty of Nursing at the University of Baghdad

Ali D. Abbas, PhD*

* Instructor, Fundamentals of Nursing Department, College of Nursing, University of Baghdad

المستخلص

الهدف: تهدف الدراسة الى دراسة دور تقنية المعلومات المستخدمة في التعليم التمريضي مثل "الإنترنت، وخدمات البريد الإلكتروني، والمؤتمرات المرئية والمسموعة وغيرها" لكلية التمريض في جامعة بغداد.

المنهجية: دراسة وصفية تحليلية استعمل فيها أسلوب الفحص حيث أجريت الدراسة على عينة غرضية غير احتمالية مكونة من (٤٢) من أعضاء الهيئة التدريسية لكلية التمريض في جامعة بغداد. تم بناء الاستمارة الاستبائية لأغراض الدراسة مكونة من جزئين؛ الجزء الأول يتضمن الخصائص الديموغرافية لأعضاء الهيئة التدريسية مثل (العمر، الجنس، المؤهل العلمي، اللقب العلمي، والفرع العلمي في الكلية) والجزء الثاني يتضمن (٢٢) سؤال عن تقنيات المعلومات المستخدمة في التعليم التمريضي، حيث تم بناءها من خلال مراجعة الأدبيات ذات العلاقة بتقنيات المعلومات المستخدمة في التعليم. جمعت المعلومات من خلال تقنية الإدخال الشخصي خلال المدة من ٤ إلى ٣٠ أيلول ٢٠١١.

النتائج: استعمل في تحليل البيانات أسلوب الإحصاء التحليلي الوصفي (التكرارات والنسب المئوية)، وتحليل التباين (ANOVA). أشارت نتائج الدراسة إلى أن أغلب أعضاء هيئة التدريس يشجعون استخدام تقنيات المعلومات المختلفة في التعليم التمريضي.

الاستنتاجات: استنتجت الدراسة الى أن ارتفاع المؤهل العلمي لأعضاء هيئة التدريس أدى الى ارتفاع إلمامهم بتقنيات المعلومات وأهميتها في التعليم التمريضي.

التوصيات: أوصت الدراسة على ضرورة أعداد قاعدة بيانات عن استخدام تقنية المعلومات في الكلية وكذلك كليات التمريض الأخرى لجامعات العراق لتسهيل عملية تحديد الاحتياجات، والتخطيط لخدمات نظم المعلومات والتوزيع الأمثل لموارد الخاصة بتقنيات المعلومات في التعليم التمريضي.

Abstract:

Objective(s): The study aims at examining the role of technical information used in nursing education, such as "the Internet, e-mail services, video, audio conferencing and other "in the College of Nursing at the University of Baghdad.

Methodology: A descriptive and analytical study which was using the examination approach was conducted on a non-probability sample (purposive sample) of (42) members of the faculty of the College of Nursing at the University of Baghdad. A questionnaire was constructed for the purpose of the study. It was consisted of two parts; the first part which included the demographic characteristics of faculty members (such as age, sex, qualification, scientific title, and the scientific department in college) and the second part includes (22) question about the technical information used in nursing education, Where it was built through the review of the literature related to technical information used in education. Data were collected through a self- administration method, from 4th to 30th September, 2011. Data were analyzed through use of descriptive analysis (frequencies and percentages), and inferential statistical measures which include the (ANOVA).

Results: The results of the study indicated that the majority of faculty members are encouraged to use various technical information in education nursing.

Conclusion: The study concluded that the high qualification of faculty members led to a high familiarity with technical information and its importance in nursing education.

Recommendations: The study recommend the need to develop a database on the use of technical information in the college as well as for the other Nursing colleges universities in Iraq to facilitate the process of identifying needs, planning services for information systems and the optimal allocation of resources for technical information in nursing education.

Keywords: Technical Information, File Transmission Protocol, Video Conferencing, Grade default

Introduction:

Health care delivery increasingly requires timely information for effective decision making, for this reason the technical information must be integrated into nursing education curricula for all future nurse clinicians and educators⁽¹⁾.

Over the past ten years technical information has made a substantial impact on the way students learn and how they are taught. This evolution has been driven by factors and events internal and external to nursing education. The nursing profession has long recognized the need for nurses worldwide to possess a basic set of informatics competences if they are to operate effectively in an increasingly technologically driven world. Over the coming years the use of technology will continue to change the landscape of nursing education, health care delivery and nursing practice⁽²⁾.

Improving technical information is a top nursing education priority. Improving care access, quality, and cost effectiveness, technical information skills are vital for professional development and advancement. Nursing programs have embraced distance learning and added informatics content, courses, and specific technologies; however, undergraduates' and educators' skills are still considered inadequate⁽³⁾.

Combining technological applications in support of classroom and clinical education can reduce these barriers and increase efficiency, thus expanding educational capacity while conserving scarce financial resources⁽⁴⁾.

Distance technology can be used to facilitate statewide teaching and sharing the delivery of nursing learning resources. Advances in simulation and virtual technology now offer excellent adjuncts to "live" clinical education, reducing the barriers associated with limited experiences, limited clinical sites, and limited clinical faculty resources. Technology provides efficient, safe, and effective alternatives to expand clinical teaching opportunities⁽⁵⁾.

There are two groups of electronic media use in nursing education the first group of electronic media include: On-Line databases, On-line-discussion, Courses-on demand, Teletext and Videotext, Audio-graphics, E-books, and E-library. The second group of electronic media include: Computer-

based instruction, Audio / Tele-Conferencing, Video Conferencing, Virtual Class, and Internet. This mean that there is a big role of technical information in the development of nursing education, and the light of this study, the problem can be formulated in the main question: what's the role of technical information in the development of nursing education?⁽⁶⁾

Methodology:

Objective of the study: The study objectives to examining the role of technical information used in nursing education, such as "the Internet, e-mail services, video, audio conferencing and other "in the College of Nursing at the University of Baghdad.

Design of the study: A descriptive approach is carried out to achieve the purpose of the study.

Setting of the study: The study is conducted at the College of Nursing at the University of Baghdad.

Sample of the study: A purposive "non-probability" sample of (42) members of the faculty of the College of Nursing at the University of Baghdad.

Data collection: The data were collected through a self-administration method by using a questionnaire which was constructed by the researcher for the purpose of the study, includes:

1. Demographic characteristics of faculty members include: age, sex, qualification, scientific title, and the scientific department in college.
2. (Twenty-two) question about the technical information used in nursing education.

The data collection from 4th to 30th September, 2011. A panel of 4 experts has reviewed a questionnaire for its content validity. The reliability coefficient for the questionnaire was 0.82.

Statistical data analysis: Appropriate statistical approach is used that includes frequencies and percentages to describe the distribution of demographic characteristics of sample and inferential statistical measures which include the (ANOVA).

Results:**Table 1.** Distribution of sample by their demographic characteristics

List	Variables	F.	%	Cumulative%
1.	Age (years)			
1.1.	Less than 30	8	19	19
1.2.	30 – 39	12	28.6	47.6
1.3.	40 - 49	5	11.9	59.5
1.4.	50 and more	17	40.5	100
	Total	42	100	
2.	Gender			
2.1.	Male	17	40.5	40.5
2.2.	Female	25	59.5	100
	Total	42	100	
3.	Qualification			
3.1.	Bachelor	3	7.1	7.1
3.2.	Master	20	47.6	54.8
3.3.	Doctor	19	45.2	100
	Total	42	100	
4.	Scientific title			
4.1.	Assistant Instructor	23	54.8	54.8
4.2.	Instructor	6	14.3	14.3
4.3.	Assistant Professor	10	23.8	23.8
4.4.	Professor	3	7.1	100
	Total	42	100	
5.	Scientific Department in college			
5.1.	Fundamentals of nursing department	7	16.7	16.7
5.2.	Adults nursing department	13	31	47.6
5.3.	Pediatric nursing department	3	7.1	54.8
5.4.	Maternal and child health nursing department	11	26.2	81
5.5.	Psychomental health nursing department	5	11.9	92.9
5.6.	Community health nursing department	3	7.1	100
	Total	42	100	

F. =Frequency, %=Percent

This table shows that the distribution of age indicated that the majority of sample's ages were 50 years old and more who were accounted for (40.5 %), more than half (59.5 %) were female. The qualification represents that nearly two quarter (47.6%) have master degree; more than half (54.8%) have the scientific title (Assistant Instructor). (31 %) of the sample were from adults nursing department.

Table 2. Distribution of sample by use of computers and the Internet

List	Item	Yes		No	
		F.	%	F.	%
1.	Do you have a computer in your office?	32	76.2	10	23.8
2.	Do you use computers in the teaching of nursing?	39	92.9	3	7.1
3.	Have you ever used the Internet?	38	90.5	4	9.5
4.	Did you use the Internet to download the curriculum for the teaching of nursing students?	34	81	8	19
5.	Have you ever participated in the sessions of the use of computers and the Internet?	31	73.8	11	26.2

F. =Frequency, %=Percent

This table indicates that (76.2%) of sample have computers in office,(92.2%) use computers in the teaching of nursing , most of them (90.5%) use the Internet and (81%) use the Internet to download the curriculum for the teaching of nursing students ,also (73.8%) participate in the sessions of the use of computers and the Internet.

Table 3. Distribution of sample by the use of technical information in the development of nursing education

List	Item	Yes		No		To some extent	
		F.	%	F.	%	F.	%
1.	Using international expertise to use technical information in the development and improvement of nursing education.	14	33.3	16	38.1	12	28.6
2.	Using national expertise to use technical information in the development and improvement of nursing education.	18	42.9	9	21.4	15	35.7
3.	Availability of laboratories for Computer.	21	50	13	31	8	19
4.	Availability of connection to the Internet service.	38	90	2	4.8	2	4.8
5.	Availability of computer network that covers all scientific departments.	26	61.9	10	23.8	6	14.3

F. =Frequency, %=Percent

The findings of this table show that (38.1%) of sample say that The College of Nursing at the University of Baghdad don't use international expertise to use technical information in the development and improvement of nursing education, and (42.9%) of sample say the college use national expertise to use technical information in the development and improvement of nursing education,(21%) there is laboratories for Computer available at the College of Nursing at the University of Baghdad, connect to the Internet service available at the College of Nursing at the University of Baghdad (90%), (61.9%) computer network covers all scientific departments in the college.

Table 4. The sample distribution according to satisfaction with the services provided by the website of the Faculty of Nursing at the University of Baghdad

List	Item	Are you satisfied with the services provided by the website of the Faculty of Nursing at the University of Baghdad?	
		F.	%
1.	Yes	16	38.1
2.	No	6	14.3
3.	To some extent	20	47.6
	Total	42	100

F. =Frequency, %=Percent

This table shows that (47.6%) of the sample to some extent satisfied with the services provided by the website of the College of Nursing at the University of Baghdad.

Table 5. Distribution of sample by the use of electronic libraries

List	Item	Yes		No	
		F.	%	F.	%
1.	Do you have a special participation in the national electronic libraries?	20	47.6	22	52.4
2.	Do you have private subscription libraries in the electronic world of nursing?	13	31	29	69
3.	Do you support the idea of establishing a national electronic library, private with nursing?	40	95.2	2	4.8

F. =Frequency, %=Percent

This table indicates that (52.4%) of the sample don't have a special participation in the national electronic libraries, also (69%) don't have private subscription libraries in the electronic world of nursing, and (95.2%) support the idea of establishing a national electronic library, a private nursing.

Table 6. Order of importance of technical information to different trends of members of the study sample

List	technical Information	I agree		I do not know		disagree		Total		Mean	SD	V	O
		F.	%	F.	%	F.	%	F.	%				
1.	Internet	39	92.9	0	0	3	7.1	42	100	2.14	0.52	0.27	2
2.	Electronic Mail	40	95.2	0	0	2	4.8	42	100	2.09	0.43	0.18	1
3.	CD ROM	37	88.1	5	11.9	0	0	42	100	2.11	0.32	0.10	3
4.	Computer Based Instruction	40	95.2	1	2.4	1	2.4	42	100	2.07	0.34	0.11	1
5.	Video Conference	39	92.9	1	2.4	2	4.8	42	100	2.11	0.62	0.39	2
6.	Virtual Class	30	71.4	9	21.4	3	7.1	42	100	2.35	0.61	0.38	7
7.	Internet Relay Chat (IRC)	35	83.3	3	7.1	4	9.5	42	100	2.26	0.62	0.39	4
8.	Discussion Group	34	81	6	14.3	2	4.8	42	100	2.23	0.53	0.28	5
9.	File Transfer Protocol (FTP)	33	78.6	9	21.4	0	0	42	100	2.21	0.41	0.17	6
10.	News Group	30	71.4	11	26.2	1	2.4	42	100	2.30	0.51	0.26	7
11.	Smart Board	35	83.3	6	14.3	1	2.4	42	100	2.19	0.45	0.20	4

SD= Standard Deviation , V=Variance , O=Order , F. =Frequency, %=Percent

This table shows that Electronic Mail and Computer Based Instruction (95.2%), Internet and Video Conference (92.9%), and CD ROM (88.1%) more use by members of the faculty of the college of nursing at the University of Baghdad.

Table 7. Analysis of variance for the difference between demographic characteristics and order of importance of technical information to different trends of members of the study sample

Demographic characteristics	Source of variance	Sum of Squares	df	Mean Square	F	Sig.
Age	Between Groups	3.968	3	1.323	.164	.920
	Within Groups	306.436	38	8.064		
	Total	310.405	41			
Gender	Between Groups	21.460	1	21.460	2.971	.092
	Within Groups	288.944	40	7.224		
	Total	310.405	41			
Qualification	Between Groups	19.921	2	9.960	1.337	.274

Table 7. Continued

	Within Groups	290.484	39	7.448		
	Total	310.405	41			
Scientific title	Between Groups	26.117	3	8.706	1.164	.336
	Within Groups	284.287	38	7.481		
	Total	310.405	41			

df =Degree of freedom , F= F-statistics , Sig.=level of Significance

The findings in this table indicate that there are no significant difference between (age, qualification, and scientific title) and order of importance of technical information to different trends of members of the study sample at ($P \leq 0.05$), while there are significant difference between gender and order of importance of technical information to different trends of members of the study sample at ($P \leq 0.05$).

Discussion of the Results:

Related to the age of sample distribution, most of members of the faculty of the college of nursing at the University of Baghdad are at age 50 years old and more (Table1). These results indicate that the majority of members of the faculty of the college of nursing are middle age. This result is similar to the results obtained from study done by Arishi, 2007 which indicates that the majority of sample ages are middle adulthood⁽⁷⁾.

Concerning the gender, large number of sample is female. Results out of this data analysis are supported by Al-Shehri, 1995 who states that large number of sample are female in study done in technical colleges in the Kingdom of Saudi Arabia⁽⁸⁾.

With regard to the qualification, this character is represent (47.6%) of sample possess a master's degree. The scientific title, this character is accounted for more than half of the samples possess an assistant Instructor. Such result supported by study done by Al Manee, 2000 which reports that most of the members of the faculty of the college of nursing have assistant Instructor title⁽⁹⁾.

With regard to the Scientific Department of sample, it is demonstrated that most of the sample from adults nursing department 13 (31%) in college of nursing.

The study findings demonstrate that more than half of sample have computers in office, most of the members of the faculty of the college of nursing use computers in the teaching of nursing, also most of them use the Internet to download the curriculum for the teaching of nursing

students, and participate in the sessions of the use of computers and the Internet (Table2). This result is consistent with the study done by Al-Shehri, 1995 which indicates that the majority the members of the faculty of the college of nursing fluent use of the Internet in the teaching curricula of nursing⁽⁸⁾.

Table (3) indicates that the college of nursing don't use international expertise to use technical information in the development and improvement of nursing education, but use national expertise to use technical information in the development and improvement of nursing education, laboratories for computer available at the college of nursing at the university of Baghdad and connect to the Internet service, also computer network covers all of scientific departments in college.

This indicates that the staff college of nursing, moving in the right direction for use of technical information in the development of nursing education and especially, nursing university.

The study findings demonstrate that (47.6%) of the sample to some extent satisfied with the services provided by the website of the college of nursing (Table4). This calls for the development of website services of the college to meet with needs of users.

While table (5) shows that more than half of sample don't have a special participation in the national electronic libraries and don't have subscription libraries in the electronic world of nursing. Most of them support the idea of

establishing national electronic library, private nursing.

This result is disagreeing with the study done by Blinko, 1996 which indicates that the most of the members of the faculty of the college of nursing in Jordan have private subscription libraries in the electronic world of nursing⁽¹⁰⁾.

Here, must encourage the participation of private ownership of each member of the faculty of the college of nursing in electronic world of nursing.

The finding of table (6) reveals that the electronic email, computer based instruction, internet, video conference, and CD ROM more use of technical information in college of nursing at university of Baghdad. This result is consistent with the study done by Al-Shehri, 1995 which indicates that internet, electronic email, and CD ROM more use of technical information in technical colleges in the Kingdom of Saudi Arabia⁽⁸⁾.

The finding of this study indicates that there are no significant difference between (age, qualification, and scientific title) and order of importance of technical information to different trends of members of the study sample at ($P \leq 0.05$), while there are significant difference between gender and order of importance of technical information to different trends of members of the study sample at ($P \leq 0.05$).

This result is inconsistent with the studies done by Al-Shehri, 1995; Al-Rashoud, 2001; and Malik, 2000 which indicate that there are

significant difference between (age, qualification, and scientific title) and order of importance of technical information to different trends of members of the study sample at ($P \leq 0.05$), while there are no significant difference between gender and order of importance of technical information to different trends of members of the study sample at ($P \leq 0.05$)^(8, 11, and 12).

Conclusion:

The study concluded that the high qualification of faculty members led to a high familiarity with technical information and its importance in nursing education.

Recommendations:

1. The need to prepare a database on the use of technical information in colleges of nursing to facilitate the process of identifying needs, planning services for information systems and the optimal distribution of the potential and resources for technology to develop nursing education.
2. Increase awareness and understanding of the importance of technical information and take advantage of them in various stages of nursing education.
3. Encourage the participation of private ownership of each member of the faculty of the college of nursing in electronic world of nursing.
